DRIVING — SIGNATURE

— DRIVING SIGNATURE

The LX's basic characteristics have been redefined with the GA-F platform and significant weight reductions.

To provide drivers with a relaxed and high-quality driving experience on various roads around the world, we comprehensively reviewed basic vehicle characteristics to support the evolution of driving, while retaining the traditional body-on-frame structure. Adopting the GA-F platform and reviewing the entire vehicle from the ground up, Lexus produced a dramatic enhancement in driving performance, including a low centre of gravity, significant weight reduction, and enhanced body rigidity.

— DRIVING SIGNATURE

The LX suspension is designed to realise both excellent driving performance and handling stability on various roads. The suspension delivers high-quality ride comfort, stable vehicle posture when braking, and an integrated system that absorbs shocks and vibrations from the road surface.

High-mount Double Wishbone Front Suspension System

The suspension geometry and spring constant of the coil springs are optimised, resulting in both excellent vehicle stability and ride comfort. The suspension stroke, an important factor in off-road driving performance, has sufficiently long compression and rebound to achieve superior road-holding and rough-road driving performance.

Trailing-link Rigid-axle Rear Suspension System

The highly-reliable axle-type system was inherited from LX DNA. Fine-tuning of the suspension arm, shock absorber placement and characteristics enhances control of axle movements, contributing to greater stability and ride comfort. The ample rebound stroke helps provide outstanding road-holding performance.

Rear Shock Absorbers

The LX features a trailing-link rigid-axle rear suspension with a lateral control arm, designed to deliver strong off-road capability and stable on-road handling. The suspension layout and tuning is designed to reduce shock and vibrations, improving ride comfort and vehicle stability.

— DRIVING SIGNATURE

The high-rigidity body and frame work as one to enhance response and ride comfort, creating premium driving performance.

High-rigidity Body

Based on computer analysis of the body in response to steering under test conditions, the number of spot weld points was increased for strength and the placement of adhesive around doors and floors carefully applied to realise superior body rigidity. This has not only enhanced off-road performance, but also steering responsiveness and feedback along with rear grip feel and ride comfort. All contributing to a superior driving experience.

High-rigidity Frame

Outstanding robustness is built in, ensuring the engine and fuel tank are fully protected. Side rails in areas subject to stress when driving on rough roads have been enhanced with nine crossmembers positioned to balance strength, rigidity and collision safety performance. In addition, steel plates up to 5mm thick and high tensile steel plates have been positioned to minimise the impact of shocks on the vehicle body, reducing the impact on handling stability and ride comfort, even when driving on rough roads. The frame-based structure and precisely mounted body, means that even if damage is sustained during off-road driving, basic driving performance is much less likely to be affected.

— DRIVING SIGNATURE

Body and frame: Innovative lightness made possible by lightweight materials and technology.

Lightweight Body

The lightweight aluminium alloy materials in the hood, roof and door panels helps reduce rotational mass and improve the vehicle's balance. These components, positioned higher and further from the centre of gravity, contribute to a lightweight, high-strength body that delivers smooth, natural handling during turning, acceleration and braking along with excellent stability.

Lightweight Frame

Using the Tailor Welded Blank (TWB) (curved) process, in which steel members of different thicknesses are joined by laser welding and then press-formed, realise weight reductions while maintaining strength and rigidity. TWB is used in strategic areas that help contribute to the strength and rigidity of side rails and crossmembers, enhancing safety performance.

— DRIVING SIGNATURE

V6 twin-turbo engine: realising smooth, linear acceleration.

3.5-Litre V6 Twin-turbo Engine

The LX 600 features a 3.5 Litre V6 twin turbo petrol engine, which delivers maximum output of 305kW and maximum torque of 650Nm. The LX 700h features a 3.5L V6 twin turbo petrol engine with 1M-HEV, which delivers maximum outputs of 341kW and maximum torque of 790Nm. D-4ST with multi-hole direct-injection injectors, together with a long stroke, high-speed-combustion made possible by optimising the valve pinching angle, and high-efficiency twin turbochargers, produces powerful low-speed torque and excellent boost response. The highly efficient twin turbocharger offers wide and flat torque characteristics that delivers boost from low speed, realising strong and easily-controllable power for both on-road and off-road driving.

3.3-Litre V6 Diesel Engine

Available on LX 500d models only, the 3.3-Litre two-way, twin turbo diesel engine features a dedicated design with optimally tuned components for driving in tough off-road conditions. A two-way turbo system generates excellent turbocharging performance in various situations by switching to single turbo mode to provide powerful acceleration in the low speed range, and twin-turbo mode to provide continuous acceleration in the high speed range. Low flow combustion technology contributes to both powerful driving and environmental performance.

Direct Shift-10AT

To realise a more direct response, lockup is activated in almost all speed ranges except when starting. By adopting a 10-speed transmission, the gear steps have been crossed and the overall gear ratios widened to produce a smooth and comfortable driving rhythm, as well as starting acceleration and off-road performance. In addition, both the petrol and diesel engines feature optimised drive force characteristics and gear shift timing. The petrol engine provides a pleasant acceleration feeling that draws out the extended torque characteristics up to the high rpm range. In diesel engine models, the torque characteristics rise from the low rpm range to provide powerful acceleration that matches the driver's intentions.

— DRIVING SIGNATURE

Active Height Control (AHC) supports driving with peace of mind on various roads, and Adaptive Variable Suspension (AVS) contributes to a quality ride.

Active Height Control (AHC)¹

In response to the driving environment, Active Height Control (AHC) automatically adjusts the LX's ride height to suit different driving conditions. It selects from four height settings - Normal, High 1, High 2, and Low - based on the drive mode, terrain, and vehicle posture. This helps improve comfort, stability and off-road capability. When easy access mode is activated, the vehicle lowers itself to make getting in and out easier, then raises again when you drive off. During off-road driving, AHC works with the terrain and gear settings to lift the vehicle for better clearance and control. You can easily check the current height on the instrument cluster and 7-inch display.

Adaptive Variable Suspension (AVS)

AVS features a linear solenoid valve system that realises excellent damping force switching response, contributing to smooth, fine-grained control on different road surfaces and driving conditions. Damping force is set low to provide excellent ride comfort when driving over bumpy city roads, and increases to give a flat stable ride when turning. Also, the damping force changes with the drive mode selected, contributing to driving in line with the driver's preference.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely.
Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DRIVING SIGNATURE

Electric Power Steering (EPS) contributes to driving faithfully to the driver's intention, with Electronically Controlled Brakes (ECB) System helping to enhance safety and security.

EPS shown.

Electric Power Steering (EPS)

With EPS, the LX responds linearly from the start of steering operation. At low speeds, such as off-road driving, the light steering feel contributes to reducing the burden on the driver. At high speeds, a moderate steering force in line with the vehicle's speed provides a driving experience faithful to the driver's intentions, and a responsive steering feel that is distinctively Lexus.

Electronically Controlled Brakes (ECB) System¹

A sensor detects the degree to which the brake pedal is depressed and producing optimum braking force and providing more linear braking characteristics. When Multi-terrain Select is activated during off-road driving, it provides exceptional driving stability through fine-grained brake control of slipping or spinning wheels, giving the driver a feeling of security.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely.
Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DRIVING SIGNATURE

Multi-terrain Select¹: Delivering driving performance to best suit current road conditions.

● Selectable ○ Not selectable

Multi-terrain Select¹ allows the driver to choose from six driving assist modes according to road conditions during off-road driving. The system has evolved to support off-road driving from extremely low speeds on rocky terrain, through to higher speeds on unpaved roads. This is done by extending the operating range from the conventional low transfer range (L4) to include the high range (H4). Integrated control of brakes,

driving force, and the suspension allows the system to deliver rough-road driving performance according to road conditions. AUTO mode uses information from various sensors to estimate the road conditions while driving and automatically select the optimal mode. Which enables the driver to obtain the best driving performance for each driving situation without having to switch modes.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely.
Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DRIVING SIGNATURE

Multi-terrain Monitor¹ provides you with the added peace of mind while off-road driving.

Underfloor View and Both-sides View

Front View and Both-sides View

Wide Back View and Both-sides View

Underfloor View (Rear wheels) and Both-sides View

Back Underfloor View and Both-sides View

Underfloor View (Rear wheels) (Enlarged)

Back Underfloor View (Enlarged)

Multi-terrain Monitor¹

This system supports the driver by using four cameras to show conditions around the vehicle. Images from the front, left, right and rear cameras can be selected by a camera switch and viewed full-screen on the 12.3-inch touch display. This allows the driver to check road conditions around the vehicle which are often in blind spots. By composing camera images that match the vehicle's height while driving off-road, it provides the driver with a clearer picture of the surrounding environment.

Underfloor View (Rear wheels) and Both-sides View/ Underfloor View (Rear wheels) (Enlarged)

Images of the foreground taken in advance are provided to the driver as transparent-underfloor images. By superimposing the vehicle and wheel position over this image, the driver can check underfloor conditions and rear-wheel position. In addition, the vehicle is made transparent, and an image showing the area around the rear wheels is enlarged, assisting the driver to ascertain conditions around the rear wheels and estimate distances to obstacles. This is helpful when trying to free the vehicle from a stuck position or exit a dead end.

Back Underfloor View and Both-sides View/ Back Underfloor View (Enlarged)

This feature displays the area around the rear wheels by simulating the vehicle through a composite of images taken while the vehicle is reversing, helping the driver to understand the position of obstacles behind the vehicle and check the rear wheels and road surface. This assists driving performance on woodland roads, moguls and rocky roads.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely. Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DRIVING SIGNATURE

Crawl Control¹ assists during extreme low speed driving with Downhill Assist Control^{1,2} for the stable descent of steep hills.

Crawl Control¹

When driving in rough off-road conditions or on slippery roads, Crawl Control enables driving at extremely low speeds by allowing the driver to simply steer without operating the accelerator and brake pedals. By suppressing wheel spin and wheel lock, the ability to free the vehicle when stuck while minimising the load on the drivetrain can be achieved. Vehicle speed is selectable from five options based on the conditions. If the driver operates the accelerator while Crawl Control is active, the system will not interfere with the accelerator operation, providing seamless drive force and brake control. This allows the driver to operate the accelerator pedal when they want to accelerate, contributing to stress-free off-road driving. In addition, when approaching and driving through tight turns, a Turn Assist function is designed to control brake force on the inside rear wheel to enhance turning performance.

Downhill Assist Control^{1,2}

When descending steep hills where engine braking alone is not sufficient to slow the vehicle, the system can be activated to control four wheel braking at the flick of a switch, supporting steady stable descent without locking the wheels. This helps to maintain the selected vehicle speed, so the driver can concentrate on steering without worrying about using the brake or the accelerator.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely. All images indicative only and not to scale.

²Operates while descending a hill at speeds of 4-30km/h or less in H4 range transfer gear.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DRIVING SIGNATURE

Running Ground Clearance¹

The LX inherits the outstanding dimensions of an authentic off-roader used in successive generations, including a 2,850mm wheelbase and 210mm minimum running ground clearance which provides both high-level performance on rough terrain and a spacious interior. The angle of approach² and departure³ delivers exceptional rough road drivability, even over rough terrain with harsh undulations or fallen trees.

¹Dimensions are approximate and are subject to individual vehicle variances, accessory fitment and weight carried.

²22 degrees for Overtrail, 23 degrees for Luxury, F Sport and Sports Luxury grades.

³21 degrees for Overtrail and LX 700h models, 22 degrees for Luxury, F Sport and Sports Luxury grades.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DRIVING SIGNATURE

Newly developed wheels, honed aerodynamic functionality and a deep quietness in the cabin is brought together to create exhilarating on-road driving.

Tyres

Tyres for all wheel sizes (18-inch,¹ and 22-inch²) optimise rolling resistance and reduce unsprung weight. The tread patterns and structure were also optimised to deliver exceptional ride comfort and quietness, as well as excellent handling stability and braking performance on both dry and wet surfaces.

¹Available on Overtrail grades only.

²Available on Luxury, F Sport and Sports Luxury grades only.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

Active Noise Control (ANC) / Engine Sound Enhancement (ESE)

ANC reduces any engine and intake/exhaust booming noises that occur. Audio speakers in the cabin output sound waves designed to suppress excess noise, keeping the interior quiet. In addition, ESE produces a lively engine note in response to accelerator operation and torque, creating a highly realistic feeling of acceleration through the audio speakers.

LEXUS — DESIGN

— DESIGN

Fusing the strength of an authentic off-roader with sophisticated inner-city style.

The starting points for the exterior design were a 2,850mm wheelbase and ground clearance angle,² passed down through successive generations of LX to provide outstanding rough road handling. Building on this proven LX tradition, we developed a new platform that fuses the presence of an authentic off-roader with stylish proportions. The front pillars have been pulled toward the rear to create a cab-backward design, with a stout torso and up to 22-inch tyres,¹ the largest in the Lexus lineup, to create a dynamic and smart expression.

¹22-inch tyres available on Luxury, F Sport and Sports Luxury grades only.

²Dimensions are approximate and are subject to individual vehicle variances, accessory fitment and weight carried. Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DESIGN

The front design projects both style and function.

Grille and Engine Hood

In a bold expression of LX dynamism, the spindle grille has a three-dimensional shape with seven sets of floating bars that create a seamless, frame-free structure.¹ Fine-tuning the thickness of each bar to the millimetre achieves both a stylish look and the high-level cooling performance required by a twin-turbo engine. The side radiator grilles also have large openings for enhanced cooling performance and are shaped to provide a high-level rectifying effect. Together with the concave shaping in the centre of the engine hood that further enhances forward visibility to make it easy for the driver to judge vehicle pitch, where styling and function become one.

¹Not available on F Sport models.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DESIGN

The refined rear profile asserts a solid impression.

The sides exude a strong sense of unity and mass, with a thick, horizontal torso that starts at the front and runs through to the rear quarter pillars. Narrowing from the roof to the back window and flowing from the underside of the vehicle to the lower edge of the rocker panels and behind the rear tyres. The Lexus name logo on the back symbolises the next generation of Lexus.

Full LED Rear Combination Lamps (Tail, Stop, and Turn Signal Lamps)

The L-shaped rear combination lamps flow on a continuous axis from the front to the shoulders and into the rear silhouette, highlighting the sharp, inflected design, consistent with the Lexus brand. The rear fog lamp is standard on all grades.

— DESIGN

Headlamps that have evolved into three-dimensional clearance lamps.

Full LED 3-eye Projector Headlamps (Low-beam and High-beam)

The combination of thin, compact 3-eye projector LED headlamps and L-shaped Daytime Running Lamps (DRL) emphasise power and aggression. DRL's have evolved into a three-dimensional shape, and the inner lenses doubled, with each on a different level to project depth that changes with the viewing angle.

Door Mirrors with Foot Area Illumination

Foot area illumination built into the door mirrors, projects the Lexus logo onto the ground in a subtle expression of Lexus hospitality.

— DESIGN

A cockpit that creates a deeper dialogue with the vehicle.

The LX incorporates the Tazuna Concept, a cockpit design that allows the driver to connect more intuitively with the vehicle and better concentrate on driving. It realises smooth line-of-sight movement and operation, to produce a deeper dialogue between driver and vehicle. This is realised by placing the centre of the display within 30 degrees under the driver's line-of-sight for easy viewing while driving, with a clear unobstructed view that guides the eyes from the road ahead to the head-up display, meter and 12.3-inch touch display

with the navigation screen. Driving switches such as Multi-terrain Select are positioned within easy reach in the centre cluster, even when the driver is being pressed into the seatback on a steep uphill slope. Air conditioning controls and other switches under the 7-inch touch display in a functional layout are prioritised by ergonomics. It is also evident in the level top edge of the 12.3-inch touch display, which helps maintain a sense of equilibrium while driving on rough roads.

— DESIGN

A passenger seat space designed for posture support and comfort on rough roads.

The thickness and angle of the front door grip has been carefully designed to grab easily, helping the occupant to maintain posture during off-road driving. In addition, soft pads on the shoulders and lumbar region of the front door trim emphasise protection providing both comfort and a sense of security for passengers.

— DESIGN

A rear seat space designed for premium comfort and ease.

Door Trim and Rear Windows

A long, sleek armrest runs front to rear, with soft pads on the shoulders exuding a refined and secure feel. Manual sunshades for the rear windows, together with black ceramic etched on the windows between the sunshade and trim, enhance light-blocking to provide a relaxing space for rear-seat occupants.

Not available on Luxury grades.

Rear of the Front Centre Console

The air conditioning registers and control panel feature a satin-grain appearance that expresses premium quality. The console box which opens on both the left and right sides, has open switches on the driver's and passenger seat sides, as well as the rear-seat side for easy opening and closing from the rear seats.

— DESIGN

Meters

A multi-information display in the centre of the meter displays vital information and driving conditions according to the driving mode. The display, including an oil pressure gauge and battery voltmeter, enables the driver to check vehicle status at a glance, even in harsh off-road conditions. The display on the 12.3-inch TFT LCD meter changes to reflect drive mode select and other settings.

Genuine Woodgrain Steering Wheel¹

The steering wheel features paddle shifters that let you shift gears instantly without taking your hands off the wheel. Thumb rests are designed for optimal fit, and a profile that creates a stable steering feel thanks to large concave indents. Genuine woodgrain on the top and bottom sections exude a quality feel.

Fingerprint-authentication Push-start Switch²

The start system has a fingerprint sensor in the centre of the push-start switch. When the driver has the Electronic Key and touches the fingerprint sensor while pressing the brake pedal, the fingerprint information is checked against the fingerprint information registered in the vehicle.

¹Not available on F Sport models.

²Available on F Sport, Sports Luxury, and Overtrail models only. Fingerprint registration may not be available depending on the condition of the fingerprint. If you are unable to use the switch, you can start the engine by putting the Electronic Key close to the switch. Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DESIGN

A centre cluster designed for easy operation of switches.

Centre Cluster

The controls are arranged for easy recognition, with air conditioning and driving-related controls separated in upper and lower zones. Assorted toggle, push-button, and dial-type switches facilitate intuitive operation while driving.

Air Conditioning Controls

The temperature controls use an easy-to-operate toggle movement, while other controls have push-button switches with concave surfaces that naturally fit the hand. The hazard switch has a frame on both sides to help prevent accidental operation due to finger slip during off-road driving.

Driving-related Controls

The push-button switches for driving-related controls have a deep cross-section profile to prevent finger slip causing unintended operation while off-road driving, and are large enough for easy operation while wearing gloves. The simple mode select dial is intuitive to use while off-road driving.

Dual Display

The instrument panel incorporates dual upper and lower touch displays, to simultaneously show necessary information on each display. For example, during on-road driving, the upper 12.3-inch touch display shows navigation on the full screen while the lower 7-inch touch display shows air conditioning information. During off-road driving, the 12.3-inch touch display shows the Multi-terrain Monitor¹ with road surface and other conditions, while the 7-inch touch display shows driving conditions such as vehicle height, vehicle inclinometer and acceleration/braking pedal operation. Switches including driving-related functions are integrated in the lower display for easy use while driving.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely. Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DESIGN

Two highly visible, easy-to-operate displays add display functionality.

12.3-inch Touch Display

In addition to showing navigation and audio information, when off-road driving the display shows the Multi-terrain Monitor,¹ depicting a range of road surface and driving conditions.

7-inch Touch Display

Air conditioning controls are displayed as well as driving-related information including Multi-terrain Select and Drive Mode Select.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely. Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DESIGN

Front seats designed for comfort in harsh environments.

The seats feature a three-dimensional shape that combines soft lines with functionality, fusing a wide, open shoulder profile that wraps around the upper back with a lumbar profile that allows easy arm movement while driving. The materials in the cushion pads provide excellent stability and pressure dispersion. Optimal distribution of hardness suppresses sway in the lower back and reduces upper body inclination, contributing to superior hold in low G-force driving.

Seat Ventilation¹

A suction intake system draws air from the air conditioner into the seats, so that cool air flows past occupants' sides to create a pleasant sensation. The system is interlinked with the air conditioner and features an 'extra high' mode that maximises output.

Seat Heaters

The placement and temperature distribution of the heaters were refined from an ergonomic perspective to effectively warm the shoulders and lumbar region, which are susceptible to fatigue on long drives, and the thighs and upper legs, which tend to get cold on cooler days. A three-level temperature control allows the heaters to be used not only during winter, but also while using the air conditioning in summer.

¹Available on F Sport, Sports Luxury and Overtrail models only.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DESIGN

Second and third-row seats designed for comfort.

Folding rear centre armrest with 2 cupholders. Sports Luxury model shown.

Sports Luxury model shown.

Second-row Seats (with 60:40 Split Folding)

The height and cushioning of the side support on the second-row seats were optimised to enhance holding performance. The height of the folding rear centre armrest was customised with cupholders positioned for easy use. To enhance entry and exit, the centre pillar has been made thinner, and the corners of the rear seat cushion rounded to make it easier to get in and out.

Third-row Seats (with 50:50 Split Folding and Power Reclining Function)¹

The third-row seats power recline by approximately 10-degrees to expand the luggage space. The seats include a cupholder and USB Type C charging port in the quarter trim. The double flat seats automatically fold flat on the luggage space floor when stowed, by pressing and holding a switch.

Tumble Switch²

Press the switch to move the front seat forward. When the forward movement is complete, release the switch to tumble fold the second-row seats.

¹Available on Luxury and Sports Luxury 7 Seater models only.

²Available on Sports Luxury models only.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DESIGN

Seating arrangements include adaptable settings that expand your luggage space and assist access.

Luggage Space

The flexible luggage space provides convenient storage space with the rear seats upright, and can be expanded as required by folding one or more of the third-row¹ and second-row seats down to accommodate changing combinations of passengers and luggage.

¹Not available on Overtrail, and F Sport models.
Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DESIGN

Refinements and quality, within every detail.

Material Expression

The centre console and upper instrument panel feature a combination of solid metallic ornamentation and premium leather wrapped pads. Outstitching applied on the frequently seen and touched grips provides an authentic, high-quality feel. The meticulously handcrafted premium leather wrapping highlights attention to the smallest of details.

Speaker Grille Design

The speaker grilles on the Mark Levinson[®],¹ 3D Surround Sound System feature a leaf vein-inspired pattern inspired by the warmth of nature.

¹Product and company names are trademarks of their respective owners.
Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— DESIGN

Expressing the highest quality through attention to detail.

Multi-colour Ambient Illumination

Indirect illumination enriches the beautiful forms and materials in the cabin. The entire cockpit is illuminated, adding colour to the interior space. In addition to 14 theme colours inspired by beautiful natural phenomena, you can choose from 50 custom colours, changing the interior colour to match your mood.

Interior Trim (Artwood Takanoha)¹

Evoking the distinctive look of a hawk feather, this Lexus-original artwood design was inspired by the majestic beauty of a powerful bird of prey. Throughout the cabin is delicately expressed wood marquetry, hand built by skilled Japanese craftspeople.

¹Available on Sports Luxury models only.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

LEXUS — F SPORT

— F SPORT

Exclusive F Sport features and styling heighten an engaging driving experience.

Exclusive F Sport Exterior Design

The lowered front end of the F Sport instantly creates a powerful sporting presence, highlighting exclusive design features that include the F-mesh spindle grille with jet-black plated frame. The styling is designed to enhance cooling and performance, with a mesh pattern in the rear lower bumper, 22-inch forged aluminium wheels and a unique colour finish that exudes toughness.

Tazuna Elements

- A F-mesh grille
- B Jet black plated grille frame
- C Satin-plated molding
- D F Sport emblem

- E F Sport-exclusive grille pattern
- F Satin plating
- G Centre cover (black material colour)
- H F Sport-exclusive 22-inch aluminium wheels

— F SPORT

Exclusive F Sport Performance

The bold F Sport styling is brought to life in exhilarating driving performance through a host of exclusive performance enhancements. These include front and rear performance dampers, a rear stabiliser, and Torsen[®] Limited Slip Differential (LSD) which optimally distributes drive force in response to the load on the rear left and right wheels, as well as enhancing rear tyre traction when accelerating in a turn. Dedicated tuning of the EPS and AVS further sharpens handling stability especially in on-road driving, together with the lively sporty response that is a unique F Sport characteristic.

— F SPORT

Exclusive F Sport interior design.

The dramatic Flare Red and Black F Sport interior, complemented by Hadori aluminium ornamentation is inspired by the temper pattern of Japanese swords for the trim and sets the scene for sports driving exhilaration. A focus on exclusive sporting control inspired the enhanced side supports and firm seat cushions of the front seats to maintain a stable driving posture during turns. The use of dimpled premium leather on the steering wheel and shift lever knob enhances grip and the aluminium pedals and footrest provide honed functionality. The sports performance look and styling is further reinforced by F Sport emblems in the headrests, steering wheel and scuff plates.

— F SPORT

Exclusive F Sport Meters

The high-definition 12.3-inch CG meter includes unified red illumination of needles and meter readouts, contrasting with the dark colours of the meter dials for better in-dash visibility.

Exclusive F Sport Steering Wheel

The steering wheel profile and the shift lever knob utilise F Sport dimpled premium leather that creates a sleek sports design appearance and enhances grip, sharpening drive control.

Exclusive F Sport Scuff Plate

The subtle F Sport emblem embossed in the stainless steel scuff plates is a reassuring reminder of your F Sport performance and power every time you open the door.

LEXUS — SAFETY

— SAFETY

LEXUS SAFETY SYSTEM + 

Pre-Collision System: Designed to detect vehicles, pedestrians and cyclists.

Pre-Collision System with collision avoidance with pedestrian (day or night) and cyclist (stationary day and night) detection using millimetre-wave radar and monocular camera sensors¹

When the system detects a vehicle, pedestrian (day or night), or cyclist (stationary day and night) ahead using the millimetre-wave radar and monocular camera sensors, it is designed to alert the driver of a possible collision with a warning buzzer and alert on the multi-information display. If the driver depresses the brake pedal, pre-collision brake assist operates. If the driver cannot depress the brake pedal, pre-collision braking is designed to activate to help avoid a collision or mitigate the impact force. Pre-collision braking operates for pedestrians and cyclists in the 10km/h to 80km/h speed range, for example helping to avoid a collision or mitigate the impact force when the difference in speed between the vehicle and a pedestrian is about 40km/h. It operates for other vehicles when the vehicle's speed is above 10km/h. For example, it is designed to help avoid a collision or reduce the impact force when the vehicle's speed relative to a stopped vehicle is about 50km/h. The system also brakes to help lower speed in the event of a collision with an oncoming vehicle.

Intersection Assistance (Right/Left Turn)¹

When turning right at an intersection, if the millimetre-wave radar and monocular camera sensors detect an oncoming vehicle going straight when turning right or left, or pedestrians crossing from the opposite direction, it alerts the driver and activates the brakes to help avoid a collision and mitigate damage.²

Emergency Steering Assist¹

If the Emergency Steering Assist system detects a collision with a vehicle, pedestrian or cyclist ahead is likely and there is sufficient space for the vehicle to be steered within its lane and the driver has begun an evasive steering maneuver, it assists steering to help enhance vehicle stability and prevent lane departure.³

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely. All images indicative only and not to scale.

²Cyclist detection not available with Intersection Assistance.

³System may not operate if it determines there is insufficient evasion space or an obstacle within the evasion space.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— SAFETY

LEXUS SAFETY SYSTEM + 

LTA (Lane Tracing Assist)¹: Providing lane-keeping assistance.

When Dynamic Radar Cruise Control¹ (with full speed range) is activated while driving on expressways and automobile-only roads, LTA reduces the load on the driver by assisting steering operation to help keep the vehicle in the lane. Even when Dynamic Radar Cruise Control (with full speed range) isn't activated, the Lane Departure Alert and Steering Assist functions continue to operate.

Lane Centring Function¹

In addition to providing assistance on gentle curves, Lane Centring is designed to smoothly keep the vehicle in the centre of the lane with minimal sway. Lane tracing performance has been significantly enhanced thanks to advancement in the camera recognition technology. Even when it is difficult to detect white or yellow road markings, the system is designed to help track the vehicle ahead. In addition, when the system determines the vehicle may deviate from its lane as a result of not being able to negotiate a

curve, it alerts the driver by displaying a warning and urges the driver to operate the steering wheel. The system is designed to also decelerate in advance of an upcoming curve based on its sharpness. Keeping lateral G forces constant when driving through curves provides a stable, comfortable ride while enabling uninterrupted driver assistance, even on curves with a small radius.

Lane Departure Alert/Steering Assist¹

When the system detects possible lane or road deviations, it displays a message on the colour head-up display and multi-information display, vibrating the steering wheel, or sounding a buzzer to alert the driver. Steering is also assisted to help avoid lane departure. The system is designed to not only recognise white lane markings, but also the boundaries between asphalt and grass, dirt, curb stones and other objects.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely. Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— SAFETY

LEXUS SAFETY SYSTEM + 

A range of helpful features are provided to assist in reducing driver workload and improve visibility and safety.

Dynamic Radar Cruise Control (With full speed range)¹

When the millimetre-wave radar and monocular camera sensors detect a vehicle driving ahead, the system is designed to maintain a suitable distance based on the vehicle's speed. If the preceding vehicle stops, the system is designed to stop the vehicle and remains stopped until the preceding vehicle starts moving again, and resumes tracking when the driver accelerates from a stop. This is designed to significantly reduce driver workload in stop-start traffic, such as driving on a congested freeway. The wide detection angle of the millimetre-wave radar and expanded forward recognition range of the monocular camera can detect vehicles cutting-in ahead. In addition, when a turn signal is operated at speeds of approximately 80km/h or greater, the system supports smooth driving operation by accelerating gradually in preparation to pass the preceding vehicle, even if it is travelling slowly. Further, while driving with Dynamic Radar Cruise Control activated, the Curve Speed Reduction function is designed to reduce speed when the steering wheel begins to turn if it determines a slower speed is required.

Road Sign Assist (RSA)¹

RSA is designed to use the monocular camera to detect speed limit road signs and display them on the multi-information display. Speed limit signs are shown on the colour head-up display, to reduce the risk of missing road signs and help support safe driving. In addition, when the system infers that the driver has overlooked speed limit road signs, it notifies the driver by reversing the sign colours or flashing the sign display.

BladeScan Adaptive High-Beam System (AHS)¹

BladeScan AHS reflects LED light onto a blade mirror rotating at high speed to smoothly illuminate the road ahead significantly enhancing visibility at night. The LEDs switch on and off in synch with the rotating mirrors, designed to finely adjust illuminated and shaded areas, distributing light to enable quick recognition of distant pedestrians, road shoulders, signs, and other objects. It is designed to help reduce the stress of driving at night by partially blocking high beams so they do not dazzle oncoming and preceding vehicles, contributing to safer driving.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely. Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— SAFETY

LEXUS SAFETY SYSTEM + 

A parking assist system that helps to assist in reducing minor collisions.

Rear Cross Traffic Alert (RCTA)¹

To assist safe reversing, RCTA uses quasi-millimetre-wave radars in the rear bumper to detect approaching vehicles in difficult-to-see areas behind the vehicle. If an approaching vehicle is detected, RCTA alerts the driver using a buzzer and indicator in the relevant door mirror.

Parking Support Brake (PKSB)¹ (For static objects in front and behind)

If the system determines there is a high possibility of a collision with a static object such as a wall while travelling at low speed, it is designed to apply the brakes to mitigate injury or damage. It alerts the driver of the distance to and degree of hazard posed by static objects such as walls when travelling at low speed, with indicators on the colour head-up display, multi-information display, and front and rear buzzers.

Parking Support Brake (PKSB)¹ (For vehicles approaching from behind)

If the system determines there is a high possibility of a collision with a crossing vehicle approaching from behind, it is designed to apply the brakes to reduce injury or damage. It also alerts the driver of vehicles approaching from behind when backing out of a parking space, with indicators on the door mirror and 12.3-inch touch display, and a rear buzzer.

Parking Support Brake (PKSB)¹ (For pedestrians approaching from behind)

If the system determines there is a high possibility of a collision with a pedestrian behind the vehicle, it is designed to apply the brakes to mitigate injury. Drivers are alerted of pedestrians behind the vehicle when backing out of a parking space with an indicator on the 12.3-inch touch display and a rear buzzer.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely. Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— SAFETY

LEXUS SAFETY SYSTEM + 

Blind Spot Mirror (BSM) with standstill warning function: Helping to avoid collisions with doors, bicycles, and other objects.

Blind Spot Mirror (BSM)/Overtaking Vehicle Warning¹

In addition to vehicles to the rear which are difficult to see in the door mirrors, BSM monitors adjacent lanes up to approximately 60 metres behind the vehicle to detect rapidly approaching vehicles. If a vehicle is detected, an indicator in the door mirror illuminates. If the driver operates the turn signal after an overtaking vehicle has been detected, the indicator flashes to alert the driver. In addition, if the system determines there is a high possibility of a collision with a detected vehicle approaching from behind, it rapidly flashes the hazard lamps to alert the overtaking vehicle.

Standstill Warning Function¹

The system's sensors are designed to detect bicycles (daylight only) and vehicles (two-wheeled and four-wheeled) approaching from behind while the vehicle is stopped and help avoid collisions and mitigate damage by determining the possibility of a collision with an open door when the ignition is on. If a door is opened when the system detects that there is the possibility of a collision, an indicator on the door mirror flashes and a buzzer sounds to alert occupants.

¹Driver assist feature. Only operates under certain conditions. Check your Owner's Manual for explanation of limitations. Please drive safely. Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— SAFETY

LEXUS SAFETY SYSTEM + 

Body and Frame for Omnidirectional Collision Safety

The LX's traditional ladder high-strength frame was redeveloped to provide a high level of robustness and rigidity, largely due to optimal side rail cross-section characteristics, and the optimal placement of crossmembers with high joint rigidity, along with careful placement of high-tensile steel. The cabin uses high-tensile steel and a structure that effectively absorbs the energy of frontal collisions is designed to provide an exceptional level of collision safety, helping create a safe space for occupants.

A Body that Helps to Protect Pedestrians

High-tensile steel is used for the body frame to provide high strength while reducing weight.

The aluminium engine hood was designed to maintain a buffer space around the engine compartment and help lessen impact force during a collision with a pedestrian.

— SAFETY

LEXUS SAFETY SYSTEM + 

The LX's airbag and tyre pressure systems is designed to protect you and your occupants for greater peace of mind.

Supplemental Restraint System (SRS) Airbags

The LX features dual or single-stage SRS airbag (Driver's seat), dual-stage SRS airbag (Front passenger seat), SRS knee airbags (Front seats), SRS side airbags (Front and outboard rear seats), and SRS curtain shield airbags (Front and rear seats).

Auto Location-Tyre Pressure Warning System (AL-TPWS)

AL-TPWS enhances tyre life by displaying the pressure of each tyre including the spare tyre in the multi-information display. When low tyre pressure is detected, the display shows the air pressure value of the affected tyre in amber, together with an in-meter warning lamp.

LEXUS — FUNCTIONALITY

— FUNCTIONALITY

The functionality and convenience of Door Easy Closer and Digital Rear-view Mirror.

Door Easy Closer (Front and Rear)

A practical smooth closing function that reliably closes side doors that have been left ajar.

Digital Rear-view Mirror¹

When switched from optical to Digital Rear-view Mirror mode, the wide mirror displays real-time images from the back-up camera to provide a wider field of view unobstructed by headrests or passengers' heads, helping to safely check behind the vehicle. The high-resolution images have natural colours, and also realise clear visibility at night.

¹Available on F Sport, Sports Luxury and Overtrail models only.
Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— FUNCTIONALITY

Lexus Climate Concierge: The comfort of automatic personalised climate control.

Lexus Climate Concierge

Lexus Climate Concierge provides whole-body comfort for each occupant. It also contributes to energy saving, limiting excessive operation by controlling overheating and overcooling. By programming their preferences in advance, occupants can enjoy continuous comfort without the need to adjust settings. In this way, the Concierge works just like the finest Japanese hospitality. Interiors become harmonious and comfortable, and the needs of occupants are prepared and considered in advance.

Climate Concierge Switches

The auto air conditioning, heated steering wheel,¹ and seats with seat heater and ventilation² are activated by a single action. When an occupant is detected in the front passenger seat or an outboard second-row seat, the corresponding air-conditioning system is automatically linked to maintain individual comfort.

Auto Air Conditioning with Four-seat Independent Temperature Adjustment

Air temperature and vent settings can be controlled independently for the driver's seat, passenger seat and outboard second-row seats.

Seats with Seat Heater and Ventilation² (Front seats and outboard second-row seats)

Quick-heating and quick-cooling functions make the ride more comfortable, while "AUTO" setting maintains whole-body comfort.

Heated Steering Wheel¹

In "AUTO" setting, when heater operation conditions are met, the heated steering wheel turns on automatically and warms the wheel for a certain period of time.

¹Available on F Sport, Sports Luxury and Overtrail models only.

²Ventilated seats available on F Sport, Sports Luxury and Overtrail models only.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

— FUNCTIONALITY

Thoughtful details are designed to make accessing your vehicle effortless.

Aluminium Roof Rails/Moonroof (Power Tilt and Slide)

Roof rails made of lightweight aluminium help to reduce the adverse vehicle movement. The moonroof, which creates a feeling of openness in the cabin, is standard equipment.

Hands-free Power Back Door (with pinch prevention and stop position memory functions)

Even if both hands are full, when carrying the Electronic Key you can open and close the back door automatically by moving your foot under the rear bumper and out again.

Side Steps

The ergonomically designed sidesteps support easy entry/exit. The size, position and height of the steps are optimised to provide good ground clearance when driving on rough roads.

— FUNCTIONALITY

Dynamic, natural audio that creates a unique listening experience.

Mark Levinson®¹ Reference 3D Surround Sound System

Since it pioneered high-end audio over 40 years ago Mark Levinson® has reigned supreme, and Lexus is the only premium car brand equipped with its audio systems. Based on the Mark Levinson® PurePlay™ concept to realise a pure, distortion-free sound, the LX is optimally equipped with 25 speakers, the most in the Lexus lineup. 9 Unity speakers (which incorporate a tweeter and mid-range speaker in a single unit) are positioned at the same height around the cabin to create a live stage effect that extends from front to back and left to right, and clear unified reproduction of mid and high-ranges.

The system also incorporates ceiling speakers, and Quantum Logic Immersion (QLI) surround technology to create three-dimensional sound that envelops the listener in natural realistic sound. The setup recreates a live sound stage, with excellent localisation and a reproduction of sound sources that provide a listening experience close to that of being in a concert hall. In addition, Clari-Fi™ compressed audio reproduction technology supplements bass and high frequencies lost when the music files were compressed, eliminating distortions that occur during compression to reproduce natural vocal qualities and stereo presence. It also supports high-resolution audio playback.

Overseas model shown. Australian specifications and features may differ. See your Lexus dealer for details.

LEXUS — OWNERSHIP SOLUTIONS

A woman in a long, light-colored dress stands on a stone patio, looking out at the ocean during a golden sunset. The sun is low on the horizon, reflecting on the water. To the left, there are two lounge chairs with white cushions. In the foreground, a large, dark-colored sectional sofa is partially visible. The scene is peaceful and luxurious.

Lexus Ownership Solutions allow you to determine your finance costs and know the Guaranteed Future Value (GFV)+ of your vehicle from the outset. Offering you choice, control and certainty. In short, everything you'd expect from Lexus.

The Guaranteed Future Value (GFV) is the minimum value of your new or approved demonstrator Lexus at the end of your finance contract, as determined by Lexus Financial Services (LFS). If you decide to return your car to Lexus at the end of your term, LFS will pay you the agreed GFV which will be put against your final payment, subject to fair wear and tear conditions and agreed kilometres being met. The information provided is general in nature. You should seek your own financial advice to determine whether Lexus Ownership Solutions is appropriate for your individual circumstances. Please speak with your Lexus Dealer for more information. Terms, conditions, fees and charges apply. Lexus Ownership Solutions GFV products are available to approved customers of Lexus Financial Services, a division of Toyota Finance Australia Limited ABN 48 002 435 181, AFSL and Australian Credit Licence 392536.

— LEXUS OWNERSHIP SOLUTIONS

How does Lexus Ownership Solutions work?

You choose the deposit that best fits your needs.

- You choose your term, ranging from 1 – 4 years.
- You decide on the estimated kilometres you think the vehicle will have travelled at the end of the term (the End Odometer). The End Odometer will also include any kilometres already on the vehicle.
- Lexus Financial Services (LFS) then determines the GFV¹ of your vehicle and calculates your monthly repayments with a final payment equal to the GFV. The GFV is the minimum value of your Lexus at the end of your finance contract. So, if you choose to return your Lexus at the end of the term, LFS will pay you the GFV which will be put towards the remaining balance owing on your account (subject to fair wear and tear conditions and agreed kilometres being met).

The end of the term? Simply replace, retain or return.

At the end of your term you can choose to:

- Replace or sell your Lexus using the trade-in value or sale price to pay the remaining balance of your account.
- Retain your Lexus and simply pay the remaining balance of your account (including final payment).
- Alternatively, return your Lexus and, subject to fair wear and tear conditions and the agreed kilometres being met, we'll put the GFV towards the remaining balance on your account.

Choosing your deposit – what is best for you?

With the flexibility of Lexus Ownership Solutions, you can choose the deposit that best fits your current needs.

- If, for example, you have funds tied up in other investments, you can choose to finance your new Lexus with a zero deposit.⁴
- Alternatively, by using a larger deposit, you can lower your monthly repayments.
- Or, compared to other finance options over a similar term with no GFV or equivalent balloon final payment, Lexus Ownership Solutions can provide lower monthly repayments.²

Want more certainty?

With Lexus Ownership Solutions, you've got the reassurance that at the end of the term (subject to fair wear and tear and agreed kilometres being met), you will know your GFV,¹ the minimum value of your Lexus from the outset, as determined by LFS.

What happens in the case of the unexpected?

If your vehicle incurs damage and does not meet the Fair Wear and Tear guidelines, LFS will give you the opportunity to have your vehicle repaired. Otherwise, LFS can organise the repairs and deduct the cost from your GFV. This adjusted GFV will then be the price that LFS will offer you if you return the vehicle at the end of your term. Of course, if you retain the vehicle, the condition doesn't matter, however, if you replace it or sell it privately, the condition will obviously impact your sale price.

So what does your accountant think?

Naturally, we think Lexus Ownership Solutions is an excellent, innovative way to put you in control of buying a new Lexus. That said, we suggest you seek independent advice to ensure Lexus Ownership Solutions is right for you.

Wouldn't it be great if Lexus Ownership Solutions was just the beginning?

Lexus' innovations and commitment to customer service extend well beyond Lexus Ownership Solutions. Once you purchase a new Lexus you'll gain access to Encore, Lexus' luxury ownership program.³ For further details, simply visit your nearest Lexus dealer or see lexus.com.au/owners/benefits

*Applicable to vehicles purchased from 1 July 2026. Excludes Connected Streaming (1 year complimentary period for eligible vehicles). Complimentary periods may vary. The different components of Lexus Connected Services may have different complimentary periods. The full 5 year period may not apply to Lexus Connected Services (subject to 4G / 5G sunset, depending on the applicable DCM fitted to the vehicle and / or termination under T&Cs, whichever occurs first) or all and all components under Lexus Warranty Experience components. See lexus.com.au/smallprint/encore-terms for full T&Cs.

¹Encore Program is available to all Lexus Vehicle Owners. Memberships and benefits vary depending on eligibility and vehicle model owned. Encore Lifestyle Benefits last for 5 years except for paid Encore Elevate which lasts 1 year from activation by Lexus. Inclusions may be substituted from time to time and may be subject to availability. For full T&Cs, see your Lexus Dealer or lexus.com.au/encore. ²Encore Elevate Lifestyle Benefits can be purchased by all Lexus Vehicle Owners (excluding current Encore Platinum members), for a 1 year period from the date Encore Elevate is first purchased by the Lexus Vehicle Owner and activated by Lexus. Inclusions may be substituted from time to time and may be subject to availability. For full T&Cs and eligible models, see your Lexus Dealer or lexus.com.au/encore. ³DriveCare applies for a 5 year period from delivery date. Coverage and service inclusions vary dependent on the type of vehicle and vehicle location. For full T&Cs see your Lexus Dealer or lexus.com.au/smallprint/encore-terms. ⁴Service Loan Car applies for a 5 year period from delivery date. Inclusions may be substituted from time to time and may be subject to availability. For full T&Cs see your Lexus Dealer or lexus.com.au/smallprint/encore-terms. ⁵Encore Platinum members receive 4 complimentary airport lounge pass redemptions at selected airport lounges over the 5 year membership. Encore Elevate members receive 2 complimentary airport lounge pass redemptions at selected airport lounges over the 1 year membership. Participating airport lounges may change from time to time. Subject to availability. ⁶Lexus On Demand may apply for a 1 year period (as part of Encore Elevate) or 5 year period (as part of Encore Lifestyle Benefits) with a varying number of redemptions depending on the type of Encore membership. Vehicles may vary dependent on location and availability. For full T&Cs, details and eligibility requirements see your Lexus Dealer or lexus.com.au/encore. ⁷Encore Platinum members receive 8 complimentary valet parking redemptions at selected locations over the 5 year membership. Participating locations may change from time to time. Subject to availability. ⁸Applies to standard scheduled logbook servicing (normal operating conditions) for specified yrs/kms (whichever occurs first) up to a maximum specified number of services (whichever occurs first). Lexus vehicles that receive complimentary servicing are not eligible for Capped Price Servicing. For details or to confirm eligibility see your Lexus dealer or visit lexus.com.au/smallprint/capped-price-servicing. ⁹Offer limited to 5c/litre fuel discount in one transaction per 24 hour period per vehicle registered to a Lexus Encore App account. Offer available on Premium Fuels, up to 150 litres, at participating Ampol service stations. List of participating locations available at lexus.com.au/owners/ampol-finder. List subject to change without notice at sole discretion of Ampol. For T&Cs, visit lexus.com.au/encore.

Weights/mass/volumes/dimensions are approximate and subject to individual vehicle variances, and should be confirmed before fitting any accessories, towing or otherwise relying on this value.

¹Weights/mass/volumes/dimensions are approximate and subject to individual vehicle variances, and should be confirmed before fitting any accessories, towing or otherwise relying on this value. ²Maximum vehicle braked towing capacity is subject to state and federal regulatory requirements. Before towing, customers should consider the vehicle's limitations, including towing capacity specifications, gross vehicle mass (GVM), gross combined mass (GCM), kerb weight specified by the manufacturer, and ensure that individual front and rear axle load limits are not exceeded as also specified by the manufacturer. Vehicle payload calculation is GVM less kerb weight or as otherwise specified in the vehicle owner's manual. Actual payload is affected by any added load to the vehicle, including the number of occupants, luggage, accessories, and tow ball download weight. It is important to consider the actual payload, to ensure the fully loaded vehicle remains within the specified GVM limits. For more details, please refer to the vehicle's Owner's Manual or consult your authorised dealer. ³Results achieved for LX in ADR81/02 combined drive cycle fuel consumption testing. Urban cycle results achieved 13.9L/100km and extra urban cycle achieved 8.0L/100km (LX 700h), urban cycle 16.8L/100km and extra urban cycle achieved 9.1L/100km (LX 600), and urban cycle 11.2L/100km and extra urban cycle achieved 7.5L/100km (LX 500d). Results were produced using new sample vehicles without fitment of accessories/customisation, and may not be replicable. ⁴Results achieved for LX in ADR81/02 combined drive cycle CO₂ testing. Urban cycle results achieved 227g/km (LX 700h), 275g/km (LX 600) and 233g/km (LX 500d). Results produced in laboratory test conditions, using new sample vehicles without fitment of accessories/customisation, and may not be replicable. Overseas model shown.
